

Introducing Asset Knowledge Management (AKM) from EnergyHunt

AKM is a secure online testing service for On and Off-shore Wind Turbine:

- Asset Owners & Managers:
 - To provide a record of inspection, test and maintenance as part of industry mandatory requirements
 - To keep a current online and up to date record of all outstanding or 'in date' testing.
 - To manage any incident investigation or occurrence.
- Financial Houses and Insurance Providers:
 - Independent due diligence and site assessment
 - Inspection, auditing and project diligence and management
- 3rd Party Service Providers & OEM's:
 - Independent verification and witnessing of work
 - Commissioning, clerk of works and testing

- Complete confidentiality is always guaranteed.
- NDA's will be signed prior to undertaking any contractual obligations.

Contact www.energyhunt.com for more details

AKM Deliverables:

EnergyHunt Limited:

- Formed as a private limited company in 2006, EnergyHunt has provided engineering and management support to utilities, asset owners, developers, 3rd party service providers and consultants on a variety of electricity generation technologies across the world.
- Projects for our clients have varied from inspection and due diligence of a 1600MW WTG portfolio in the United States to singular or small groups of turbines throughout the UK. Our roles have ranged from very specific tasks such as HSE evaluation of individual systems to basic site assessment for financial houses and portfolio owners. We have input into commissioning roles, project management, warranty and availability assessment, SCADA analysis, incident reporting and cataloging the mandatory and legislative requirements of a site.
